Since 2010, ZM International has been dedicated to introducing cutting-edge technology and providing innovative solutions to the people of Bangladesh. We aim to bring the latest advancements to our valued clients, ensuring their satisfaction through cost-efficient, high-quality products and services. Our commitment is reinforced by a team of professionally trained employees who prioritize excellence in every aspect.

As one of the leading providers of comprehensive security and risk mitigation services, ZM International is dedicated to delivering solutions even to the most remote areas of Bangladesh. Our tagline, "Assurance of Your Safety & Security," embodies our commitment to offering dynamic and innovative security solutions tailored to our clients' needs.

At ZM International, we uphold the highest standards of business ethics, guided by the belief expressed by Herman Melville: "It is better to fail in originality than to succeed in imitation." We instill these ethical values in our employees, striving to build honest, lasting relationships with both our customers and business partners.

Our vision is to continuously meet the evolving security and protection needs of our clients. Through superior service, expert solutions, and a focus on customer satisfaction, we aim to be a trusted partner in ensuring safety and security across Bangladesh.

CEO, Zakir Uddin Ahmed

Being one of the leading provider of all kinds of security and safety equipments, our mission is to provide a full range of security services across all market segment. We have extensive experience working with international resources and we are eager to try new things and to repeat well-proven success.

A photograph of a server room. Red pipes run along the ceiling and walls, connected to a control panel on the left. The room is filled with server racks. A small inset image shows a close-up of the control panel.

The diagram illustrates the Fire Monitor Control System. A central Fire Monitor Controller is connected to several components: a Water Cannon, a Water Cannon, an Explosion-proof Motor Control Box, and an Explosion-proof Fire Monitor Control Panel. The system also includes a Fire Monitor Control Panel and a Fire Monitor Control Panel.

Suppression System

FM-200™, also commonly known as HFC-227ea, is a clean agent fire suppressant for Class A, B, and C fires and meets NFPA Standard 2001 Clean Agent Fire Extinguishing Systems. Clean agents are fast and effective in suppressing fires, are safe in occupied spaces, and do not leave a residue.

Fire Fighting Pump Set

Fire Pump Drivers

According to NFPA 20, fire pumps may be driven by three types of drivers: electric motors, diesel engines, or steam turbines. These drivers provide the mechanical power required to rotate the pump shaft and impeller, delivering water at the required flow and pressure to the fire protection system.

Diesel Engine Fire Pump

A diesel engine fire pump draws water from an underground supply, water tank, lake, or reservoir and delivers it at the required pressure and flow to fire sprinkler systems and hose standpipes. The pump is driven by a diesel engine and provides a reliable water supply during fire emergencies.

Electric Motor-Driven Fire Pump

Electric motor-driven centrifugal pumps use an electric motor directly coupled to the pump shaft to drive the impeller. Depending on system requirements, these pumps are available in various configurations, including skid-mounted, lifting frame, or acoustic-frame arrangements.

Jockey Pump

A jockey pump is a small pump used to maintain the required pressure in a fire protection system during normal conditions. It compensates for minor pressure losses and prevents unnecessary starting of the main fire pump.
